PROJECT TITLE: ANIMO.SYS 2.0

FEATURES

Admin

Add a Student

A registered moderator can create an account for a student. The moderator must provide the student's full name, program, user ID, and password.

Remove a Student

A registered moderator can remove a student from the system in rare cases (e.g student is not enrolled).

Student

Log-In Screen

Log-In

After being registered, students can log in using their ID number and password. Upon logging in, the student will be sent to a page where they will have the option to pre-enlist, enroll, or view course offerings.

Google Sign-in API may also be used as a login process.

Homepage

Log-Out

The student would be prompted back to the log-in page upon selecting this feature.

1. Pre-Enlistment

Enlist in a Subject

The registered user may select subjects they would want to take depending on what is offered in their flowchart.

2. Enrollment

Class Schedule

This feature would allow the user to view his/her schedule for the entire term. The schedule can be viewed either in calendar view or tabular view. The calendar view only displays classes that have regular schedules. For subjects that would only be meeting once (e.g LASARE), it will be included on the bottom right portion of the schedule table. Above the main schedule, important schedules will be placed such as midterms/finals schedule.

Save Class Schedule

The user may save the class schedule as a PNG file.

Add/Enroll in a Class

The registered user can select from the list of available classes which ones they want to take. The list of courses offered will also be displayed on this page so that students can simply search according to class number or course code, whichever they prefer.

Drop a Class

The registered and enrolled user can select from the list of their enrolled classes which they want to drop.

Remove a Class

After adding a class to the cart, the student has the option to remove it before officially adding it to their classes.

Request a Class

The registered user can request for a class to be offered if it is not or no longer available for enrollment.

View and/or search courses offered

The user can view the list of courses offered for the next term with the following info: class number, course code, course name, units, section, day/s, time, room, faculty, enrollment cap, number of enrolled students, and remarks.

There would be a “warning” icon next to a course in the list when it has conflicting schedules with course/s the student already enrolled to. Courses that have the warnings will become unclickable/disabled which would prevent the student from enrolling in that class. If the student wishes to take the disabled course instead, they must first remove/drop the class that has conflicting schedules with the former.

3. My Profile

Personal Information

This feature would display the user’s personal information, which include their full name, year, and status (graduating or not). Only the user is allowed to make changes with the information he/she provided.

Print EAF

The profile of the student will also feature their EAF. The student can print their EAF for the current term only.

Finances

This section will display if the user has fully paid for their tuition or if he/she has any remaining balance (schedule of next payment will be provided as well). For users who are under a scholarship program, the details of their program will be found here as well.

4. Degree Process/Graduation

Documents Checklist

This feature would show what documents the user has successfully submitted.

Request of Documents

This feature would allow the user to request the documents he/she needs for graduation.

Documents Overview

This feature would allow the user to view their (own) history of document requests, etc. This would allow for easy tracking of the requested documents if it is ready for pick-up.

5. Check-Out

My Cart

This shows all the subjects the user has pre-enlisted in. They may also edit this if ever they wish to remove/add a subject.

General

Good user experience. Visitors can easily navigate without help, all information is easy to access. Good visual design. Design suits the theme of the application, and is cohesive and consistent across the whole application.
